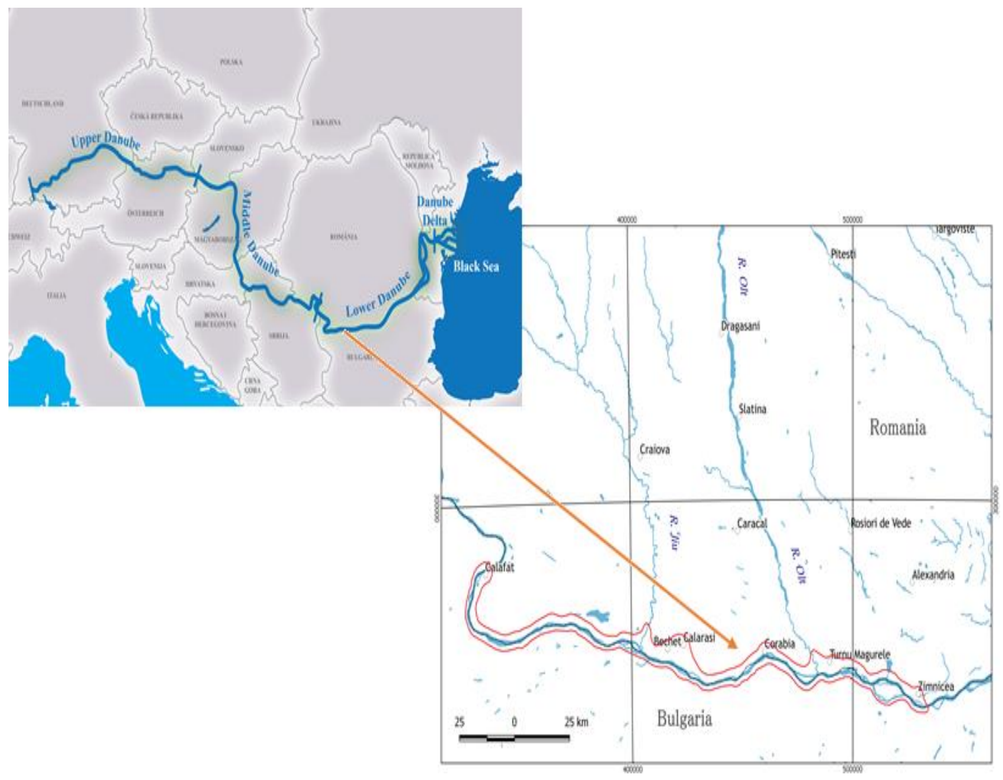
This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 730497.

## OVERVIEW OF DEMO AIM

The main goal is to create an efficient network of stakeholders trained to apply the methods and scenarios identified in the project, in order to promote sustainable development for extreme events mitigation by using the ecosystems services, ecological (re)construction and green solutions.

## Nature based Solutions

1. A range of biological, ecological, forest and water bodies green management solutions;
2. The goal of these activities will focus on developing green solutions for natural hazards prevention after a collective stakeholder identification of the problems;
3. As an example: the continuos durable development of a green Danube while ensuring a safe and continuous navigation on the Danube river.



## Key Stakeholders

1. Ministry of Regional Development and Tourism;
2. Lower Danube River Administration;
3. Romanian Waters Administration;
4. Local Administration;
5. County council;
6. Associations for Fishing and Hunting;

## Methods and data to be used

To achieve the main objective, the first step is to create a communication network/platform for the problems that each stakeholder identifies. By constant communication between the interested parties the solutioning of each problem is also possible between the directory lines of durable green development.

## Main Outcomes Sought

1. Provide a holistic inventory with the extreme events in the case study area and cause;
2. Diminishing damage outcome generated by extreme events;
3. Diminish environmental impact of urban development;
4. Create an efficient network for sustainable development.

## INSURANCE VALUE OF ECOSYSTEMS

Currently the Romanian insurance sector does not provide any coverage on this topic.

Most of the main actors are subsidiaries of larger international companies, still the range of products offered covers only the private property domain and some natural hazard risks (flooding, earthquakes, etc.) with limited coverage.

## Partner participating

## PHOTO OF DEMO SITE

### PARTNER 1 (AND DEMO ROLE):

The main role of GeoEcoMar is to create and manage a good relationship between the targeted stakeholders in the demo site. The good communication and a transparent decision making forum is to be obtained, after a mutual agreement on the existing problems, by all interested parties.

**Contact:** 23-25 Dimitrie Onciul Street, RO-024053, Bucharest, Romania

### PARTNER 2 (AND DEMO ROLE):

BDG is focused on devising a business plan for the identified solutions and a financial response to all the group necessities. By the use of a transparent infrastructure and a good flow of communication between the stakeholders, considering the aim for green solutions, a very cost efficient scenario is to be obtained.
